

Online Management Systems for Undergraduate and Graduate Education

Knowledge4You' Student Information Systems are unique Internet applications for the administration and management of undergraduate and graduate education.

Overview

Knowledge4You offers a comprehensive suite of functional modules to manage the admission, curriculum, evaluations and student affairs of college and university students. The web application comes with a central database, extensive flexibility for data imports and exports, easy to use interface, and advanced reporting.

Admissions

The Admissions module supports:

- Personal and contact information
- Previous education history and degrees
- Grade Point Average (GPA)
- Other universities applied to
- Application reviewers and scores
- Interviewers and scores
- Offer (of acceptance) and response for successful applicants.

Curriculum

Administrators can maintain and update student and applicant information online. The Curriculum module allows administrators management of all application data:

- Maintain curriculum information
- Import marks and other data, and export functions
- Manage system parameters
- View online class lists and marks
- Track students in academic difficulty

Online Evaluations are also featured by the Curriculum module:

- Evaluations of Students
- Evaluations of Teachers
- Evaluations of Courses

Student Affairs

Students requiring advice are encouraged to seek the assistance of the Director, Student Affairs. The Student Affairs module administers:

- Personal parameters
- Academic parameters
- Financial parameters
- Scholarship and awards

Registration

Fully integrated functions offer the most comprehensive capabilities for managing student registrations:

- Maintenance of academic records
- Production of transcripts
- Credentialing
- Tracking LOA (leave of absence)
- Interaction with other university systems and applications

Reporting and Analysis

A powerful online reporting and analysis engine built on advanced OLAP technology complements our systems. Through its friendly interface, it allows users to:

- Create, view, modify, print and e-mail reports
- Save, schedule and publish reports in HTML, PDF or Excel
- Analyze multidimensional data: drill down, slice and dice, filter
- Create calculated columns to support "what if" scenarios
- Customize views with a wide variety of formatting capabilities

Architecture and Security

The system has a complete security and control structure that allows complete flexibility in the functions available to each user. Our systems have the highest degree of security implemented at all levels:

- Group and user level authentication and authorization
- Transmission level with 128-bit SSL encryption
- Application level with 3-tier security architecture
- Data level security filters with precise user rights
